PROJECTS

- **FilmAI** — AI Movie Discovery Platform (React, TMDB API, Groq LLM) **Live Link** **Github:**
 - Built an AI-powered movie discovery platform frontend using React, Redux, TMDB API, and Groq, enabling users to find movie recommendations through natural-language GPT search.
 - Developed a responsive, component-based UI with React.js and Tailwind CSS, supporting features like trailers, cast details, similar movies, and dynamic movie popups.
 - Implemented centralized state management using Redux, handling movie lists, search results, and UI states across multiple pages and interactive components.
 - Optimized data fetching and user experience by integrating multiple APIs, using parallel requests, and adding shimmer loaders and lazy UI rendering for smoother performance.
- **MyTube** — React.js, Redux, Firebase, JavaScript, Tailwind CSS **Live Link** **Github:**
 - Developed a video platform frontend using React.js and Redux, enabling users to browse categorized content across entertainment, education, comedy, and short videos with a responsive, seamless viewing experience.
 - Engineered debounced search (500ms delay) using useEffect and Redux, reducing redundant API calls by ~80% and significantly lowering response latency during rapid typing interactions.
 - Built a real-time live chat feature simulating YouTube's live stream experience using API polling — with auto-scrolling messages, user-posted chat, Firebase login authentication, and a Redux splice-based message cap to prevent memory leaks.
 - Implemented n-level nested comment threads, dark/light mode toggle, and structured sidebar navigation (Home, Subscriptions, History, Watch Later, Liked Videos) mirroring YouTube's architecture.
- **Swaad Express** — React.js, Redux, JavaScript, Tailwind CSS **Live Link** **Github:**
 - Designed a food-ordering and restaurant discovery frontend inspired by real-world delivery platforms, enabling users to browse restaurants, explore menus, and place orders through an intuitive UI.
 - Built reusable and modular React components with Redux-based state management and dynamic routing, creating a scalable architecture for handling restaurant listings and user interactions.
 - Implemented a mobile-first responsive design using Tailwind CSS, ensuring consistent layout and usability across mobile, tablet, and desktop devices.
 - Enhanced user experience and rendering efficiency by organizing a clean component structure and optimized UI updates across multiple pages.
- **LooksMax** — JavaScript, CSS, HTML **Live Link** **Github:**
 - Designed and developed a modern, responsive e-commerce-style UI with strong visual hierarchy, focusing on clean layouts, consistent typography, and effective spacing to enhance usability.
 - Implemented interactive UI behaviors and dynamic features using JavaScript, including event handling and DOM manipulation, to improve user engagement and overall experience.
 - Applied responsive web design principles using HTML and CSS to ensure seamless performance across different screen sizes and devices, following a mobile-first approach.

SKILLS

- **Frontend:** React.js, JavaScript (ES6+), Redux, Tailwind CSS, CSS3, HTML5, Responsive Web Design
- **Tools:** Git, GitHub, Firebase, Figma, Netlify

EDUCATION

- **Bhai Parmanand DSEU Shakarpur Campus - 2** New Delhi, India
Bachelor of Computer Applications 2023 – 2026

CERTIFICATIONS AND ACHIEVEMENTS

- **Full Stack Developer Bootcamp (GeeksForGeeks):** Comprehensive training in MERN stack, APIs, and full-stack development concepts.
- **Responsive Web Design (FreeCodeCamp):** Focused on React, JavaScript, HTML, CSS, Flexbox, Grid, and mobile-first responsive design.
